Thank you for downloading! Plugins can be installed using the old-fashioned procedure.

MacOS

[1] Put plugins in the correct folder

It's recommended to put them in your system folder. System folders are…

- VST   =>   */Library/Audio/Plug-Ins/VST3*
- AU   =>   */Library/Audio/Plug-Ins/Components*

[2] Make plugins available (Catalina or later)

Plugins are not certified because I'm not a member of the Apple Developer Program. Therefore macOS won't let you launch them by default. But you can let them launch by following steps.

1. Open *Terminal.app*
    - this is in */Applications/Utility*
2. Enter or copy-and-paste below command, and hit Enter-key.
    - If you put plugins in a folder other than the system folder, rewrite the path
3. Enter the password of your Mac if the prompt requests to do so, and hit Enter-key
    - Note that the * mark does not appear

[2-1] for VST

`sudo xattr -rd com.apple.quarantine "/Library/Audio/Plug-Ins/VST3/lulu.vst3"`

[2-2] for AU

`sudo xattr -rd com.apple.quarantine "/Library/Audio/Plug-Ins/Components/lulu.component"`

[3] Finish

Now you can launch plugins from the host. If necessary, scan plugins from the host.

Windows

[1] Put plugins in the correct folder

It's recommended to put them in your system folder. System folder is…

C:/Program Files/Common Files/VST3

[2] Finish

Now you can launch plugins from the host. If necessary, scan plugins from the host.
